The Legal Dimension of Using Data Science for Health Discovery and Innovation in Africa

This research project will investigate five critical themes over a three-year period: (1) modes of informed consent to the use of data; (2) the nature and content of individual and community rights in genomic data; (3) the use of persons' geospatial data for public health surveillance; (4) the cross-border sharing of data; and (5) the use of data as basis for Artificial Intelligence (AI).
